Shortened User Experience Questionnaire

Obstructive	☐	☐	☐	☐	☐	☒	☐	Supportive
Complicated	☐	☐	☐	☐	☐	☒	☐	Easy
Inefficient	☐	☐	☐	☐	☒	☐	☐	Efficient
Confusing	☐	☐	☐	☐	☒	☐	☐	Clear
Boring	☐	☐	☐	☐	☒	☐	☐	Exciting
Not interesting	☐	☐	☐	☐	☒	☐	☐	Interesting
Conventional	☐	☐	☒	☐	☐	☐	☐	Inventive
Usual	☐	☐	☒	☐	☐	☐	☐	Leading edge

1. What was tested

The task for this session was buying courses. A course was opened, added to the cart, and taken through to the payment screen. No payment was made. Attention was paid to where the flow felt strongest and how it ended, following the Peak-End Rule (Kahneman et al., 1993).

2. The course page

Figure 1: The purchase panel stays on screen as the page scrolls.

Price does most of the talking. R199.99 sits beside a struck-through R1,219.99 and an 84% off label and a red clock warns that two days are left at that price. Add to cart is filled purple while Buy now is an outline underneath, so the two are easy to tell apart. Because the panel stays put while the page scrolls, the buy button is never more than one click away.

Urgency is doing the heavy lifting here. Whether the deadline is real is worth questioning because the same offer tends to return a few days later.

3. Adding to the cart

Figure 2: A green tick confirms the click, then two more courses are offered.

A panel slides in carrying a green tick and the course name meaning there is no doubt the click worked. Directly under it, Frequently bought together suggests two more courses and an Add all to cart button. Confirmation is handled well, but the upsell lands at the exact second the user feels a step has been completed.

4. The cart and the payment screen

Figure 3: Savings are the loudest thing on the cart page.

The totals shout about the discount. R439.98 replaces R2,839.98 and an 85% off line sits below. Under the checkout button there is a small note promises that nothing is charged yet, which removes the fear that the next click takes the money.

Total (2 courses): R439.98

By completing your purchase, you agree to these [Terms of Use](#).

Pay R439.98

30-Day Money-Back Guarantee

Not satisfied? Get a full refund within 30 days.
Simple and straightforward!

Figure 4: The saving is repeated once more, and the button names the exact amount.

The saving is repeated one last time at the checkout. The button reads Pay R439.98 rather than something vague like Submit. That way the amount is confirmed at the moment of paying and a 30-day money-back guarantee sits immediately below it. Putting the reassurance at the final step is deliberate since the last step is what people carry away.

5. Peak and end

The price drop is the peak. Watching R2,839.98 become R439.98 is the strongest feeling in the flow, and Udemy repeats it on the course page, in the cart and at checkout. As an ending, the payment screen works because the guarantee and the exact amount lower the risk right before the decision. Two things weaken it. Selling more courses during the added-to-cart message steals attention from a moment that should feel finished, and a countdown creates pressure rather than pleasure.

Little here is original. Card grids, sticky panels and discount banners appear on most shopping sites, which is why the last two questionnaire lines score low. That is not automatically a fault because users tend to prefer a site that behaves like the ones they already know (Yablonski, 2020).

6. Takeaways for SkillUP

- Confirm every add to cart with a visible tick and the course name.
- Keep that confirmation free of other offers so the moment stays a win.
- Show the saving as an amount and not only as a percentage.
- Put the price on the button at checkout.
- State plainly that no money moves yet before the final step.
- Save a guarantee or refund promise for the end, where it counts most.
