

UX Report 2

Research website: coursera.org

Login

Sign Up

The image shows the Coursera website with a 'Sign up' modal window open. The modal has a title 'Sign up' and a sub-header 'Learn on your own time from top universities and businesses.' It contains three input fields: 'Email *' with the value 'mooseleeee@gmail.com', 'Full Name *' with the placeholder 'Enter your full name', and 'Password *' with the placeholder 'Create password' and a note 'Between 8 and 72 characters'. Below these fields is a blue 'Join for Free' button. At the bottom of the modal, there are links for 'Already on Coursera? Log in' and 'Sign up with your organization'. A small disclaimer at the very bottom states: 'I accept Coursera's Terms of Use and Privacy Notice. Having trouble logging in? Learner help center. This site is protected by reCAPTCHA Enterprise and the Google Privacy Policy and Terms of Service apply.' The background of the page shows the Coursera Plus subscription offer with a 'Start 7-day Free Trial' button and logos for various universities like Illinois, Duke, and Johns Hopkins.

UEQ shortened questionnaire

English version		
obstructive	o o o o o *	supportive
complicated	o o o * o o	easy
inefficient	o o o * o o	efficient
confusing	o o o * o o	clear
boring	o o o o o *	exciting
not interesting	o o o o o *	interesting
conventional	o o * o o o	inventive
usual	o o o * o o	leading edge

On Coursera, selecting either the "Log In" or "Join for Free" button opens the same pop-up window, where users are first required to enter their email address. Depending on whether the email address already exists in Coursera's database, the user is redirected either to the login page or the sign-up page. Although this approach simplifies the initial interface, it may create some confusion, as users may initially be uncertain whether they are creating a new account or signing in to an existing one. This explains why the interface was rated between confusing and clear.

The authentication process was rated as supportive because the interface guides users throughout the process and provides several authentication options, including Google, Facebook, and Apple. Furthermore, the sign-up page clearly specifies the password

requirements, such as the minimum length and required characters, making the process relatively easy to understand and complete.

In terms of efficiency, the system was rated between inefficient and efficient. While combining the login and sign-up processes into a single pop-up reduces the number of pages that users must navigate through, requiring users to enter their email address before determining whether they should log in or create an account introduces an additional step that may slow down the process.

The interface was also rated as interesting and exciting due to its clean design and the variety of authentication options available, including the ability to continue as either an individual user or an organisation. However, despite these modern features, the login and registration system still follows conventions commonly found on other websites. Consequently, it was rated as slightly conventional rather than inventive and only moderately leading-edge.

Overall, Coursera's authentication system prioritises familiarity and usability over innovation, which aligns with Jakob's Law, as users generally expect login and registration systems to follow established patterns and conventions.
