Usability Test Data: SkillUP

Assignment: Group Design D
Team: Frame by Frame
Sessions held on 9 October 2026

What we collected

Five people tested SkillUP on 9 October 2026. They are called P1 to P5 and our notes and answers hold no names or contact details. We collected three kinds of data.

- **Session notes** typed while each person did the test plan tasks. They are below.
- **UEQ answers** from each person for all 26 items. They are in the UEQ answers file.
- **Screen recordings** of the sessions. We used them only for our evaluation and are not submitting them.

Session notes

P1: did the set tasks

- Task 1 (checking in courses): navbar. Scrolls through courses.
- Task 2 (looking for reports course): course sounds like it's in management course, looks through course info to see if it's the one she wants. Look at category on the card to see if it's beginner or not.
- Task 3: assumes that she has to buy the course in order to view it (so get into her cart and checkout). Successfully buys the course and checks out the lesson, and completes lessons. Complete the course before reviewing it.
- Checking progress: successfully views the progress.
- Thinks that reviews can come in the middle or the end of the course.
- Hardest to complete: nothing, design was clear, it's clear which course is which.
- Unsure what would happen next: thought she was already at the end. Clicking mark done and continue had no user interaction and confused the user. It should rather automatically scroll there.
- Problem: You can checkout without logging in or signing up.

P2: did the set tasks and signed up

- Task 1 (signing up): button easy to find, easy task
- Task 2 (looking for a certain course): uses main search button to find course (which doesn't work). Uses data filter to find course and successfully finds it.
- Task 3: adds to cart to see what he will be paying. Successfully adds to cart
- Task 4: successfully marks tasks as done and views progress.

- Task 5 (find course info): successfully find the overview, curriculum etc. tab.
- Hardest to complete: nothing
- Moment of uncertainty: Mark done and continue also confused this user and module on left should move down to put focus on the courses to be completed.
- Next page or show more courses (in the case that we had more pages).
- Layout is perfect because it tells enough info.

P3: did the set tasks as a returning user

- Micro interactions are fun.
- Returning user: log in since the page says join skill up on dashboard. (Error: even when logged in it still shows “Join SkillUp”)
- Finding certain course: uses search bar and filter.
- Enrolling and checking out this course: goes to her courses instead of going to the main courses page to enroll. Something at the bottom of the page to see her progress will be nice.
- Hardest to complete: enrolling in course
- Uncertainty of what would happen next: nothing
- Easier UX: Being more clear on what the user needs to do.
- **When logging out, data is not cleared.**

P4: did the set tasks and signed up

- Task 1 (sign in): No feedback on sign up page
- Task 2: uses main search button to find course (but that search button is not working)
- Task 3: uses filters to look for the exact course
- Task 4: says checkout. Celebration of getting course is underwhelming. Exiting of the bought course popup doesn’t have an X for easier use.
- Task 5: pop ups of lessons being completed should be on top rather than the bottom because she doesn’t really look there.
- Task 6: views courses on cards rather than going into the course itself to view the info. Spacing on course page is confusing as it makes it seem that is the whole page instead of the impression that it is scrollable.
- Hardest to complete: confusing regarding the placement of the content

P5: our lecturer, giving expert feedback

- Logged out but we can continue and buy a course. Users should be required to be signed in in order to buy a course to add a sense of safety.
- Footer is too far and *[the rest of this note was not written down]*
- A lot of empty spaces in the UI.
- Filters and sorting section takes up a large space.
- Lack of confirmation.
- Focus on user journey.
- Security is bad. Repo has a lot of available information and backend exposed.
- Certificate is not displayed or celebrated or handed out at the end of a course.
