Udemy's sign-up page provides a familiar and straightforward experience that aligns well with Jakob's Law. The layout follows conventions commonly found on modern websites, making it easy for users to understand and complete the registration process. The page is clear, supportive, and efficient, as users are guided through each step and are given alternative registration methods, such as signing up with Google, Facebook, or Apple. These options reduce the amount of information that users need to enter manually and improve the overall usability of the page.

Although the interface is easy to use, its conventional design makes it less exciting and innovative. In addition, the email verification process slightly reduces efficiency, as users must leave the website to retrieve a verification code before completing

registration. While this extra step improves security, it introduces friction into the user experience. Overall, the sign-up page prioritises familiarity and usability over innovation, which strongly supports Jakob's Law.

The login page also follows a familiar and conventional design, making it easy for users to navigate and understand. Its simple layout and clear instructions contribute to a supportive and accessible user experience that is consistent with users' expectations of modern websites. The passwordless authentication system introduces an innovative element by eliminating the need for users to remember passwords, which can improve security and reduce the risk of forgotten credentials.

However, requiring users to retrieve a verification code from their email each time they log in may negatively affect efficiency, particularly for frequent users. The additional authentication step can make the login process feel slower and more tedious than traditional password-based systems. Furthermore, the conventional appearance of the page makes it less interesting and exciting from a design perspective. Overall, the login page successfully balances familiarity and innovation, although the authentication process introduces a trade-off between security and efficiency.
